

FOUNDATION+

A BIOCONTROL AGENT

Foundation is a biological fungicide based on *Trichoderma Koningiopsis* (strain K-15); which is the active ingredient in the product. Foundation is in powder form, and can be used in both greenhouse and field production.

1 Benefits of Foundation

- ✓ Increases the yield, nutrient uptake, and immune response of the plant
- ✓ No negative impact on human health and the environment
- ✓ Acts as a plant growth stimulant
- ✓ No chemical residues on food

Trichoderma is a large group of microorganisms vital for controlling plant pathogens

2 Methods of Application

- ✓ Foliar sprays & Irrigation water
- ✓ Seed coating
- ✓ Substrate/soil drench through drip or watering can
- ✓ Dipping method; planting material like cuttings and seedlings as pre-planting treatment

Target Crops;

- ✓ Fruits
- ✓ Vegetables
- ✓ Maize

* Application should start early before the onset of diseases
